

# RV Care Flooded Deep Cycle Batteries

## Features and Benefits

- 1 Molded-in offset SAE post and vertical 5/16" negative and positive stainless steel studs and hex nuts.
- 2 Easy grip carrying handle offers **easy installation**.
- 3 High-impact cover is heat sealed to the case under extreme pressure. This helps **prevent electrolyte leakage, improve reliability and reduce breakage**.
- 4 Remote safety vents are **flame-retardant**. Keeps battery top dry and corrosion-free. Allows remote vent tube installation if required.
- 5 Forged terminal bushings are fused into the cover to provide maximum **resistance to acid seepage, corrosion and black posts**.
- 6 Thicker heavy duty full frame grids and plates withstand the corrosive environment inside the battery, delivering longer life. Exclusive high density plate paste delivers more power per pound of battery and extends service life.
- 7 Exclusive deep pocket envelope separators protect plates from internal shorts so battery lasts longer. Glass fibres from plate wrap embed themselves into surface of plate to act as reinforcement against plate shedding, prolonging life.
- 8 Specially formulated electrolyte, an exclusive feature, uses demineralized water for significantly reduced water loss and gassing.
- 9 Straight-through-the-partition cell connectors shorten current path while delivering more power-per-pound.
- 10 Thin-walled, high-impact polypropylene case reduces breakage while creating more room for power-producing plates and acid.
- Vibration resistant design ensures best performance and life.
